Predator CENTRO Shaft

Introducing the Predator Centro Shaft—where cutting-edge innovation meets the timeless feel of Maple. Crafted for players who demand more stiffness and precision without sacrificing the soul of traditional play, the Centro features a hard Maple construction fortified with a front-end carbon fiber core. This unique hybrid structure delivers a stiffer shaft for greater power transmission. Compared to a spliced Maple shaft, you will notice more power on force follow shots, draw shots, and punch strokes.

With a 12.4mm tip diameter—our most trusted size—the Centro is the ultimate choice for players seeking a confident transition between classic wood feel and advanced carbon technology. Centro gives you the authority to attack every shot with confidence—and the finesse to control the game.

- Front-loaded stiffness for superior power with authentic feedback
- Hard Maple engineered with a front-end carbon fiber core for the perfect synergy of feel and energy transfer
- Hybrid construction – natural Maple feel, carbon fiber stability
- 12.4mm tip diameter – our most popular diameter
